

HERE'S WHY:

- Mortgage Credit Scores are hard pull credit scores. These scores are calculated using the FICO scoring module. They are used and approved industry wide for all mortgage lenders.
- The FICO model is based on specific algorithms designed specifically for mortgage lenders to rate the risk level of potential mortgage clients.
- Consumers checking their own credit reports are provided generic scores, not provided by the credit agencies themselves, but by 3rd party vendors.

- Different types of lenders, auto lenders and credit card companies for instance, use scoring models that are different from mortgage lenders.
- Data from a consumer's report and a mortgage credit report should match, but the scores will vary, sometimes widely. The accuracy of the report, especially derogatory errors, should be checked and removed if incorrect.

*REMEMBER: It is still very important to monitor your own credit score!
